# JFO – Testsuite

RTF to XSL-FO conversion

Borders and Backgrounds

Background colors and patterns

Note: The DPI value for generated pattern image is configurable. Some Renderers are using a fix DPI (FOP 0.20.5 uses 72DPI by default). Background-images are not supported by all renderers (e.g. Ibex3).

Border widths

	0,5pt	
	3pt	
	6pt	

Border styles

Solid	Dot	Dash		Dot-Dash
Dot-Dot-Dash	Double	Triple	Thin-Thick (s)	Thick-Thin (s)
Thin-Thick-Thin (s)	Thin-Thick (m)	Thick-Thin (m)	Thin-Thick-Thin (m)	Thin-Thick (l)
Thick-Thin (l)	Thin-Thick-Thin (l)	Wavy	Double Wavy	Stripes

Note: For some RTF border styles there is no corresponding XSL-FO border.

Auto text color

0%	10%	20%	30%	40%	50%	60%	70%	80%	90%	100%
text	text	text	text	text	text	text	text	text	text	text

Note: When running JFO in compatibility mode FOP, page-borders are disabled and not applied to the XSL-FO / PDF. FOP has no support for page-borders, padding and margin attributes (they are used to place page-border) and thus FOP would layout documents body wrong if page-borders are enabled.
