JFO – Testsuite

RTF to XSL-FO conversion

Shapes

This example contains 2 static textboxes in header and footer, a picture-frame, a frame-group and on page 2 a relative positioned frame.

Note: Not all renderers support relative positioned frames and shapes. In such a case you have to use an absolute position, i.e. the position must be relative to the page or page-margin but not to the current paragraph.

Below are two absolute positioned picture-frames, the right has a blue thick border:

And now an absolute positioned frame group with some frames inside:

Textbox 1
with yellow
background

Textbox 2 with large left indent

Textbox 3 without border

Textbox 4 with a big blue border and red background and larger internal margins

Below is a relative positioned shape named "Hello" with a thin black border. If it appears above, the renderer doesn't support relative positions.

Hello

A
